PHYSICAL AND CHEMICAL CHARACTERISTICS

As an indicator of purity, Therminol XP meets FDA specifications defined in 21 CFR 172.878, requirements of United States Pharmacopeia (USP) and National Formulary (NF) and is registered with the NSF (HT-1). Also, a user should carefully review the information contained in a properly prepared Material Safety Data Sheet prior to making a fluid decision.

Solutia recommends that systems utilizing Therminol XP fluid should be blanketed with an inert atmosphere. Inert gas blanketing minimizes fluid oxidation and helps maximize fluid life. A system pressure relief device also should be provided.

THERMINOL[®] XP Heat Transfer Fluid by **Solutia**

While Therminol XP has a relatively high flash point, it is not classified as a fire-resistant heat transfer fluid. Consequently, the use of protective devices may be required to minimize fire risk. The insurer of your property should be consulted relative to this matter.

Therminol XP is non-corrosive to metals commonly used in the design of heat transfer systems.

The recommended maximum bulk (600 °F/315 °C) and film (625 °F/330 °C) temperatures are based on detailed thermal studies. Operation at or below these temperature maximums will provide long service life under most operating conditions.
